Art Unit: 2154

1. Claims 1-11 are presented for examination.
2. Claims 4-11 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/18/2004.

3. The information disclosure statement filed 02/19/2004 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because (5) Each publication listed in an information disclosure statement must be identified by publisher, author (if any), title, relevant pages of the publication, **date, and place of publication**. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e).

See MPEP § 609 ¶ C(1). Only those reference where this applicable were not considered.

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claim(s) 1 of patent #6,728,748 contain(s) every element of claim(s)1 of the instant application and as such anticipate(s) claim(s)1 of the instant application.

"A later patent claim is not patentably distinct from an earlier patent claim if the later claim is obvious over, or **anticipated by**, the earlier claim. *In re Longi*, 759 F.2d at 896, 225 USPQ at 651 (affirming a holding of obviousness-type double patenting because the claims at issue were obvious over claims in four prior art patents); *In re Berg*, 140 F.3d at 1437, 46 USPQ2d at 1233 (Fed. Cir. 1998) (affirming a holding of obviousness-type double patenting where a patent application claim to a genus is anticipated by a patent claim to a species within that genus). " *ELI LILLY AND COMPANY v BARR LABORATORIES, INC.*, United States Court of Appeals for the Federal Circuit, ON PETITION FOR REHEARING EN BANC (DECIDED: May 30, 2001).

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Jin et al. (6,189,033).

8. Jin et al., taught the invention as claimed including a method for implementing class of service among a plurality of clients (11a-11n) sending requests seeking access to sites hosted on a plurality of back-end servers (108a-n), comprising the steps of grouping at least one of said plurality of back-end servers into a respective one of a plurality of service classes (col. 8, lines 32-45); receiving a client request for host access at a front end processor (100); selecting a class of service from said plurality of service classes according to at least one selected parameter of said request (col. 6, lines 19-26); and distributing said request to a back-end server in said selected class of service according to the load of each of said at least one of said back-end servers in the selected service class (col. 6, lines 11-59).

As to claim 2, Jin et al. taught the least one selected parameter is/are selected from a group consisting of user authentication, virtual site level class of service and client level class of service; wherein a user authentication

Art Unit: 2154

identifies a subscribed class for an authenticated user; a virtual site level class of service is determined by host name and selected protocol; and a client level class of service is determined as a function of the request/transaction, service/protocol, authenticated user, URL, destination port, domain of origin, source IP, destination IP, and application requested (col. 6, line 24-26 IP address mask).

As to claim 3, Jin et al. taught step of distributing the request according to the load further includes a load balancing algorithm selected from the group consisting of weighted percentage; round robin; CPU availability; least connections; and probabilistic (col. 6, lines 66 –col. 7, line 2).

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
